

It's the center of our solar system, and the key ingredient to life on our planet. However, the sun also can cause irreversible damage to the valuable items in your home.

The sun can fade and damage furniture, artwork, floors, and more. And light colors aren't any safer from the harmful rays of the sun. White curtains or furniture can turn yellow, and light woods can darken over extended periods of solar exposure.

But you can protect the items in your home from the damaging effects of the sun by having SolarTex apply 3M Window Films to your windows.

Residential Applications

Protect Your Valuables

3M Window Films can eliminate up to 99% of the damaging ultraviolet rays that would otherwise discolor, fade, and damage many of the valuables in your home.

Very little is immune to the harmful rays of the sun. All of the following can fade or be otherwise damaged by the effects of UV rays, solar heat, and visible light.

- ARTWORK
- BOOKS
- RUGS AND CARPET
- FABRIC AND LEATHER FURNITURE
- CURTAINS
- WOOD FURNITURE AND INSTRUMENTS
- PHOTOGRAPHS
- WOOD FLOORS
- AND MORE

But the sun can cause more than just fading. The harmful rays of the sun can cause fabrics, woods, leathers, and plastics to dry out, discolor, and decay.

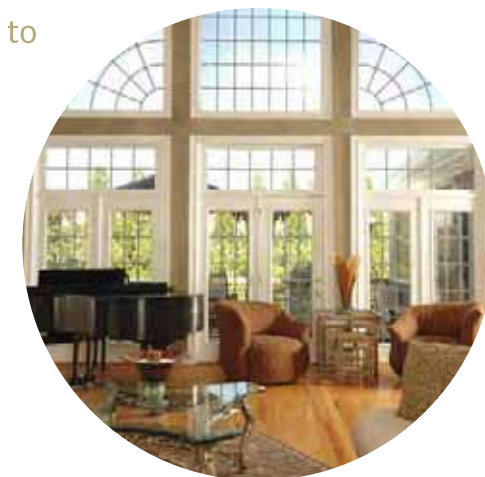

With a full array of window films, SolarTex can help you find the product that blocks out the right mix of UV, light, and heat.

Enjoy the Sunlight

SolarTex will work with you to determine the right balance between solar protection and your desire to enjoy the natural light, ambiance, and open feeling that your windows provide.

The full range of 3M Window Films come in a variety of tints, many of which are virtually clear. The Prestige Series is made without metals or dark dyes and provides fade protection from 56% to 73% – without any distortion of your view, both day and night.

All of these window films are installed and guaranteed not to bubble, peel, crack, or discolor, allowing you to take in all the beauty that exists outside your windows.

Reduce Energy Bills

By installing films that reduce the amount of solar heat that flows through your windows, SolarTex can make your home more energy efficient and reduce your utility bills. The blocking of solar heat also can reduce the amount of drying, warping, and general deterioration that can occur to many of the wood, paper, and natural fabrics in your home.
